

Custom Built Products

We are manufacturers and exporters of custom built products. These custom built products are common tests which are used in any electrical appliance testing. These systems gives more precise speed control as well as flexibility. Our range of custom built products includes synchronisers for texturising machines and yarn length control system.

We use our control and testing equipment in designing of microprocessor, Micro controller or DSP based systems to manufacture specialized systems for sophisticated control and testing applications in various fields and various Industries.

SOME OF OUR OEM PRODUCTS

- Yarn length control system
- Software and control of tensile testing machines (UTM)
- System for Box Compression Testing
- CO-HC Gas Analyser Printer
- Battery Monitoring System
- Synchroniser for Cathodic Protection Interrupter Systems
- Electrical Check out system for Vehicles (ECOS)
- On line testing system for washing machines
- On line testing system for Alternators
- R2MF line monitoring system (Mobile Communication)
- 2 Mb Data Testers
- 64 Kb Data Testers
- Medical Instruments
- Instruments for uroflowmetry

Get what you want

FEATURES

- LED / LCD alphanumeric / Graphic displays
- Membrane key pad / touch screen
- Analog inputs. Direct interface to various sensors
- Digital inputs from switches, potential free contacts, encoder, proximity sensors etc.
- Digital outputs as well as relay outputs
- Microcontroller firmware to suit the application requirement.
